SUBJECT INDEX

Adaptation-level theory, 299
  and P300, 300, 302, 304, 305
Attention, 117
  and automatic processing, 119
  and capacity allocation, 148, 149
  and event-related potentials, 119, 136, 150, 307, 311
  and irrelevant stimuli, 133
  and mismatch negativity, 121–126, 150, 307
  and N1, 120, 130, 131, 311, 313, 317
  and neuronal activity, 112
  and processing negativity, 136–139, 307, 316, 318
  attentional trace, 141, 142, 143
  divided, 117,
  early selection, 118
  in the presence of music, 307
  late selection, 118
  selective, 117, 136, 307
Automatic processing, 119, 134, 231, 236
  and consistent mapping, 232, 242, 244
  and dual-task, 231, 253
  and event-related potentials, 119, 134, 135, 231, 247, 256
  and mismatch negativity, 121–126
  and N1, 120, 130, 131
  and N200, 236, 247, 256
  and P300, 236, 247, 256
  and reaction time, 243, 244
  and varied mapping, 232, 242, 244
Capacity allocation, 148
  and attention, 148
  and N1, 148, 149
  and P3, 149, 151
Classical conditioning, 339, 342
  and sensory evoked potentials, 339, 342
  in cats, 339, 342
Endogenous components, 92, 101, 105
  and information processing, 96, 105
  and latency, 93
  and polarity, 93
  classification of, 92
  scalp distribution of, 93
  sequence of, 93
Information transmission, 17, 69
  cascade model, 181
  continuous flow model, 181
  and lateralized readiness potential, 72, 74, 76, 86
  and response activation, 69, 70, 71, 76
  and serial stages, 179, 217
  discrete versus continuous, 17, 69
Mental chronometry, 3, 5, 6, 62
  and additive-factor method, 14
  and cascade model, 15
  and choice reaction time, 5
  and cognitive psychophysiology, 4, 54
  and electromyographic activity, 4
  and event-related potentials, 4, 43, 44, 48, 49, 50, 52, 58
  and lexical decisions, 35, 38
  and motor processing, 217
  and response preparation, 18
  and simple reaction time, 5
  and speed-accuracy tradeoff, 9, 30, 34
  and stimulus evaluation, 27, 70, 76
  and subtraction method, 11
  stage model of, 5

BIOLOGICAL PSYCHOLOGY

Special Issue on Event Related Potential Investigations of Cognition
Edited by B. Renault, M. Kutas, M.G.H. Coles and A.W.K. Gaillard

Contents **Volume 26 (1988) No. 1/2/3**

Preface 1

David E. Meyer, Allen M. Osman, David E. Irwin and Steven Yantis, Modern mental chronometry 3

Michael G.H. Coles, Gabriele Gratton and Emanuel Donchin, Detecting early communication: Using measures of movement-related potentials to illuminate human information processing 69

A.W.K. Gaillard, Problems and paradigms in ERP research 91

David Lee Robinson and Michael D. Rugg, Latencies of visually responsive neurons in various regions of the rhesus monkey brain and their relation to human visual responses 111

Risto Näätänen, Implications of ERP data for psychological theories of attention 117

C.H.M. Brunia, Movement and stimulus preceding negativity 165

Jean Requin, Alexa Riehle and John Seal, Neuronal activity and information processing in motor control: From stages to continuous flow 179

Joachim Möcks, Decomposing event-related potentials: A new topographic components model 199

Bernard Renault, Nicole Fiori and Sophie Giami, Latencies of event related potentials as a tool for studying motor processing organization 217

Arthur F. Kramer and David L. Strayer, Assessing the development of automatic processing: An application of dual-task and event-related brain potential methodologies 231

Ken A. Paller, Gregory McCarthy and Charles C. Wood, ERPs predictive of subsequent recall and recognition performance 269

Huib Looren de Jong, Albert Kok, Jaap C. Woestenburg, Christa J.C.M. Logman and John C.G.M. van Rooy, Learning where to look: Electrophysiological and behavioral indices of visual search in young and old subjects 277

P. Ullsperger and H.-G. Gille, The late positive component of the ERP and adaptation-level theory 299

Dafina Dalbokova, Pentcho Kolev and Rumyana Kristeva, Selective attention in the presence of music: An event-related potentials (ERP) study 307

Margot J. Taylor, Developmental changes in ERPs to visual language stimuli 321

Márk Molnár, George Karmos, Valéria Csépe and István Winkler, Intracortical auditory evoked potentials during classical aversive conditioning in cats 339
